Meredith, et al.

➢ An icon is not included next to the 3rd statement, was this intentional?
➢ For statement #2, what do people think of adding the following statement: "Employ Best Management Practices to protect pollinators, for BMPs and information on protecting bees and other pollinators see the National Integrated Pest Management website at: http://www.ipmcenters.org "
➢ Would a separate ~~Wildlife Protection Requirements~~ (… oh, … sorry Meredith…) Protection of Pollinators box be needed for products that are applied just as a seed treatment (i.e., stand-alone seed treatment products)?   IF so, perhaps a different box, with language that is relevant/targeted for seed treatment would be appropriate for these types of products.

Here are the 2 revised documents: the "Pollinator Protection Box" and the text for the Directions for Use. (Tom S – I couldn't figure out how to add another "diamond with the bee in it" – I ended up moving it from item 3 to the new item 4! Can you add one back in?)

If you are all ok with this, let me know. Thanks.

Meredith

(but I did figure out how to do a "dead bee"..but the shadow doesn't work):
